PROJECT UPDATE – VPI in IMMINGHAM

Dear Business Owner / Resident

We are writing to keep you updated on the progress of the new Immingham Power Station, currently under construction on Rosper Rd. Delivered by METLEN, the project will play an important role in supporting the UK's energy security by providing reliable electricity during periods of high demand, and when renewable sources such as wind and solar are not producing.

With construction nearly complete, we are moving into the final commissioning phase. This will involve initial operation, testing of the turbine and generator, and eventually producing power.

We are planning to undertake this commissioning process from the week commencing Monday 2 November 2026, and expect it to run for approximately six to eight weeks subject to the commissioning programme. During this time noise levels may vary during individual commissioning / testing activities, at times, a light plume of water vapour from the chimney stack may be visible depending on the weather.

Please be assured that this is a safe, carefully managed process which takes place under controlled conditions, and a normal step ahead of the power station becoming fully operational.

When complete, Immingham Power Station will provide flexible, on-demand electricity helping to contribute to the security of electricity supply, while supporting the transition to a lower-carbon energy system in the UK.

We remain committed to keeping our neighbours informed as works continue. If you have any questions or concerns, please contact us using the details below.

Thank you for your continued understanding and support.

Alex Bill
